Methodology

Every parcel scheduled for the Butte County Aug 7-10 tax-defaulted auction was pulled from the county tax collector's site, verified for active delinquency, and enriched against three additional sources: the Butte County Recorder's chain of title, the Butte County Assessor's records for mailing and situs, and CalFire + FEMA hazard zones for property risk profile. Every field on the lead carries a provenance stamp naming the source it came from and a confidence value.

Each lead is priority-scored 50 to 100 using a log-scaled function of the defaulted tax balance (linear 50-80 up to \$50k, log 80-100 for \$50k to \$2.5M+). Higher priority = larger tax debt = more urgent for the county to sell + typically larger property. Score is a starting point, not a final ranking - combine with property fundamentals for your bidding strategy.

How to read a lead

Every row in the Leads sheet answers three questions: WHO owns this parcel, WHERE to reach them, and WHY they're likely to sell.

Workflow guide

- Sort by Priority - the highlighted rows (score ≥ 80) are your first calls.
- Filter by Portfolio Size > 1 - these owners have multiple defaulted parcels. Call once, deal on many.
- Filter by Absentee = Y - out-of-state owners are traditionally the most motivated sellers.
- Filter by Distress Score - owners with historical NODs, IRS liens, or judgment history are pre-qualified motivated sellers.
 - Cross-reference the 'Doc References' sheet to pull actual recorded documents from Butte Recorder for any lead you want to bid on.
 - Use the 'Verification' sheet to see the source and confidence for every data point.
 - Track your calls in the Notes / Outcome columns. Filter by Next Action to work your pipeline.
