

Butte County Tax Auction Intel

Prepared exclusively for Butte Home Buyers

SAMPLE PREVIEW -- 3 of 105 parcels shown

August 7-10, 2026 Tax-Defaulted Auction

This is a preview of the full intelligence pack. 3 sample dossiers from a total of 105 auction parcels, chosen to show the format and depth. The parcels shown were selected because they match a Butte residential fix-and-flip profile.

105 Auction parcels	104 Still active	\$5,052,204 Total defaulted	11 Days to auction
---	--	---	--

LIVE VERIFICATION: All 104 active parcels confirmed still delinquent as of July 27, 2026 at 01:31 PM

What's in this preview:

- 1. How the pack is built + what the verification layer does
- 2. What the county PDF gives you vs what the full pack gives you
- 3. A real catch: the parcel our pipeline flagged as REDEEMED before you'd have known
- 4. Three sample dossiers -- format identical to all 105 in the full pack
- 5. How this fits your acquisition team

How this pack is built

For every parcel on the county's Aug 7-10 tax-defaulted auction list, the pipeline cross-references six independent sources and stamps every field with its source + a confidence value:

Butte MPTS TaxBillv2	Live tax bill scrape -- balance, defaults, redemption status, power-to-sell date
Butte MBAP AsrPrint	Assessor snapshot -- land / improvements value, homeowner exemption, situs
Tyler EagleWeb	Full recorder crawl -- deeds, NODs, IRS liens, judgments, trustee sales
CalFire FHSZ	Fire hazard zone overlay -- Very High / High / Moderate
FEMA NFHL	Flood zone overlay per parcel
US Census / Nominatim	Geocoding for situs verification

The verification layer -- what makes this different

Generic lead lists rank parcels by defaulted balance and stop there. The verification layer keeps checking every parcel against live county data even after ingestion. If a parcel is redeemed, subordinated, or has any status change, the pipeline detects it and adjusts the score before the pack ships.

The next page is a real example.

The largest parcel on this auction by defaulted balance -- \$2.4M in back taxes -- was redeemed 4 weeks ago. Every generic auction list would still show it as the top target. The pipeline caught it.

"Every parcel in this report is something I would have researched myself before deciding whether it deserved another minute of my time. The goal isn't more leads. The goal is fewer wasted hours."

What you see vs what you get

The county publishes a 4-page PDF with 5 columns per parcel. The intelligence pack cross-references 6 independent county systems and delivers 70 verified fields per parcel.

County PDF (free)	Intelligence Pack
APN	Financial (8) Min bid, assessed, max safe bid, bid/value ratio, land, improvements, tax billed, balance
Owner name	Ownership (10) Verified owner, entity type, vesting confidence, mailing addr, owner state, absentee flag, class, flags, contributors, portfolio
Property address	Title & Liens (8) Doc numbers, types, dates, count, business partners, distress signals, distress score, signal counts
Jurisdiction	Tax History (8) Bill date, power-to-sell, years since PTS, redemption status, redemption date, exemption, installment, special assessments
Minimum bid amount	Environmental (6) Fire zone, fire responsibility, flood zone, flood subtype, lat, lon
5 fields. No verification.	Verification (6) Verification score, sources, flag count, owner confidence, mailing confidence, situs confidence
	70 fields. 6 sources. Live verified.

Key difference:

The county PDF is a snapshot. The intelligence pack is a live-verified decision tool.

Verification catch: parcel already redeemed

GRIDLEY BUSINESS TRUST

APN 022-210-078-000 | 177 DENIZ BROS LN, GRIDLEY

REDEEMED 2026-06-29 -- PARCEL NO LONGER ON AUCTION

This parcel had \$2,459,683 in defaulted property taxes -- the single largest exposure on the Aug 7-10 auction list. On June 29, 2026, the delinquency was paid in full. The parcel is off the auction.

What the pipeline did

Fetch	The live tax bill from Butte MPTS TaxBillv2 during pack build
Parsed	Redemption status = 'redeemed', redemption_date = 2026-06-29
Flagged	Set redemption_status field, added warning banner to dossier
Scored	Dropped priority_score from 99.9 to 0 -- parcel now sorts to bottom
Logged	raw_priority_score preserved (99.9) with reason 'redeemed'

Why this matters

If GRIDLEY had shown up on your acquisition workup as the top target, you would have spent time pulling comps, checking the situs, maybe even driving out to look at it. On a \$2.4M ag parcel with essentially no improvements it wouldn't have been your target anyway -- but the point is the pipeline knows it's off the table before you spend a minute on it. Every parcel in the full pack has been through this same verification pass.

The full intelligence pack

The full delivery includes all 105 auction parcels, packaged into a single zip file you can drop into a folder and start working from:

Excel workbook	4 tabs -- leads, verification detail, doc references, how-to
Overview PDF	3 pages -- headline stats, geographic breakdown, top 10 targets
Per-parcel dossiers	105 individual 2-page PDFs (dossier + attached tax bill)
Combined dossier PDF	All 105 dossiers in one file for easy scroll
Tax bill archive	105 raw county tax bill HTMLs -- your audit trail
Raw CSV	70 fields per parcel for programmatic use / re-scoring

Contact for pricing

Guarantee

Every lead links to the live county tax bill and the recorder document number. Verify anything in 30 seconds. If any material field on any parcel is wrong -- owner, mailing address, defaulted balance, redemption status -- I refund on that parcel's basis. No questions.
